

HTML Quick Start

GoSkills online course syllabus

Skill level

Beginner

Lessons

16

Pre-requisites

No prior experience needed

Video duration

54m

Estimated study time

54m 25s

Instructor

Tolu (TJ) Oyeniyi

Introduction

- 1 Getting started with HTML**

HTML is a versatile programming language with many different uses.
- 2 Installing your text editor**

We're going to learn how to use a text editor to write code.

HTML Basics

- 3 HTML overview**

HTML, or hypertext markup language, is most often utilized in website design.
- 4 Anatomy of HTML elements**

HTML is traditionally structured with a start and end tag, with content and elements in between the tags.
- 5 Web design with HTML**

Since HTML is most commonly used when designing a website, you'll want to be mindful of the basic structure to use.

Key HTML Elements

- 6 Text elements in HTML**

Although text content is the most common form of information you'll add to your website, you have different options for how you'd like to display your text.
- 7 IMG element in HTML**

Image tags can be used to embed an image into your HTML webpage.

8 Using links in HTML

Using web links, or hyperlinks, allows you to route your website viewer to another page or document.

9 HTML lists

If you want to group a set of related items together on a page, you'll use an ordered or unordered list.

10 Creating forms in HTML

Using an HTML form allows you to collect user input and send it to a server for processing.

11 Using HTML tables

Creating an HTML table can be an effective way to organize content and data into rows and columns.

Transforming websites with HTML

12 Using semantic elements and DIVs

Semantic elements, or tags, are a helpful guide for being able to recognize the flow of your webpage and the different areas of the page itself.

HTML Hacks and Tips for Beginners

13 Top 5 HTML Gotchas

When putting everything together and creating your first website using HTML, there are several hacks you can use to ensure you're successful.

14 Layout best practices

When you create your layout of the site, there are several things you can do to make this process simpler.

15 Launching your website

When you launch your website, there are several considerations for doing so locally as well as updating the site over time.

Conclusion

16 Your next steps with HTML

Thanks for watching this course! Now, you should feel confident in your ability to use basic HTML tools and commonly used elements to craft a webpage.
