

## Scrum for Product Owners

GoSkills online course syllabus

**Skill level**

Beginner

**Lessons**

37

**Accredited by**

CPD, PMI

**Pre-requisites**

No prior experience needed

**Video duration**

3h 16m

**Estimated study time**

18h 30m

**Instructor**

Ray Sheen

## Project Management Approaches

---

1

### Project Management Methodology

Agile/Scrum is a project management methodology. This means that it provides a set of tools and processes that can be used to organize and manage the project activities.

2

### Sequential Methodology

A sequential project management methodology is a traditional approach to project management. It minimizes risk, but this conservative approach can be lengthy and expensive.

3

### Concurrent Methodology

The concurrent project management methodology is a collaborative approach. It can significantly accelerate a project as compared to the sequential approach, but it is much more difficult to project manage.

4

### Agile/Scrum Methodology

The Agile/Scrum project management methodology is an iterative approach that requires fewer resources than other approaches.

5

### Project Management Methodology Comparisons

The three approaches presented are three very different ways of managing a project. Understanding the differences will enable a business to select the best approach for their projects.

## Agile/Scrum Elements

---

6

### Agile/Scrum Precepts

The Agile/Scrum is a project management methodology that is in sharp contrast to traditional project management. That is because it starts with a different set of underlying precepts.

7

### Sprint – Scrum Process

The Agile/Scrum methodology is a structured project management methodology. It follows a prescribed process that includes Sprints and Scrums.

## 8 Sprint – Scrum Meetings

Within the Agile/Scrum project management methodology there are a set of meetings that are used to plan and manage the process. Rather than analytical tools, this methodology relies heavily on the use of specific targeted meetings.

## 9 Story Cards

Story Cards, also known as Product Backlog Items (PBIs) are the technique used for documenting project scope, quality requirements, estimates and priority of the deliverables in an Agile/Scrum project.

## 10 Product Backlog

The product backlog is the prioritized list of project deliverables.

## 11 Sprint – Scrum Team

The Scrum Team performs the project work conducted during a Sprint on an Agile/Scrum project.

## 12 Scrum Master

The Scrum Master is the individual who is responsible for facilitating the Agile/Scrum Sprint process.

## 13 Product Owner

The Product Owner role is the person on an Agile/Scrum project who is responsible for establishing and explaining the desired project scope.

## 14 Sprint Controls

Sprint Controls are the project management tools that are used by the Scrum Master and Scrum Team to assess performance.

# Process Steps

---

## 15 Step 0: Vision

A clear goal or vision is essential to project success. That is as true with Agile/Scrum as with traditional projects.

## 16 Step 1: Preparing the Product Backlog

Preparing the Product Backlog is the first step in the Agile/Scrum Sprint methodology. It includes creating and prioritizing all the Story Cards.

## 17 Step 2: Assign Scrum Team

To do the work of the Sprint, a Scrum Team must be assigned.

## 18 Step 3: Sprint Planning

The Sprint is initiated with a Sprint Planning Session that organizes the work, estimates the effort, and initializes the Scrum Board and Burn Down Chart.

19

## Step 4: Sprint Execution

Sprint execution is the actual work of the Scrum team during the Sprint to accomplish the tasks needed to complete each Story in the Sprint Backlog.

20

## Step 5: Sprint Demonstration

The Sprint Demonstration is the formal meeting where the Scrum Team demonstrates to the Product Owner the performance of each deliverable that was created during the Sprint.

21

## Step 6: Backlog Refinement

The Backlog Refinement is the update of the Product Backlog based upon what has been completed and what has been learned in a recently completed Sprint.

22

## Step 7: Sprint Retrospective

The Sprint Retrospective is a lessons learned meeting with a focus of identifying opportunities to improve the performance and management of the next Sprint.

# Managing the Backlog

---

23

## Requirements Management

Project requirements management in an Agile/Scrum project is conducted using Story Cards and Backlogs. The list of requirements is variable and is not finalized until the end of the project.

24

## Stakeholder Engagement

Stakeholder Engagement is the effort by the Product Owner to communicate with all affected stakeholders in order to identify potential requirements and provide project status.

25

## Writing Story Cards

The Product Owner writes the story cards, which document the requested scope of an Agile/Scrum project.

26

## Prioritizing the Backlog

The Product Owner must regularly prioritize the Story Cards that make up the Product Backlog and at the beginning of a Sprint he or she must prioritize the Story Cards selected for the Sprint Backlog.

27

## Release Planning

Release planning allows the Product Owner to manage the rollout of capability in order to obtain feedback and assess progress.

# Managing the Sprint

---

28

## Sprint Planning – Part 1

The first portion of the Sprint Planning meeting consists of selecting the Sprint Backlog and clarifying Stories.

29

## Scrum Meetings

During a Sprint, the Scrum Team meets daily at a Scrum Meeting to provide status on progress.

## 30 Removing Roadblocks

Roadblocks are impediments that prevent the Scrum Team from completing Stories and tasks. The Scrum Master is charged with removing or creating a workaround for the Roadblocks.

## 31 Sprint Demonstration Planning

Sprint Demonstration Planning ensures that the Sprint Demo meeting appropriately reflects the work accomplished by the Scrum Team.

# Managing the Agile/Scrum Methodology

---

## 32 Role of Management

Agile/Scrum is an organizational approach to project management and requires buy-in from senior management to be effective.

## 33 Organizational Alignment

Organizational alignment is the activity needed to ensure the systems and processes within the organization support the Agile/Scrum methodology and do not undermine it.

## 34 Strategic Alignment

Agile/Scrum projects are often used to implement both product line strategy and operational strategy. They can be used with customer projects – but there are challenges with that approach.

## 35 Project Selection

Senior management also has the role of selecting projects that are suitable for the Agile/Scrum methodology.

## 36 Agile/Scrum Challenges

When implementing Agile/Scrum, there are several process and project challenges that most organizations encounter and must be addressed.

## 37 Agile/Scrum Failure Points

There are common reasons for why an Agile/Scrum implementation initiative will fail. Awareness of these failure points reduces the likelihood that an organization will fall prey to one of these.
